

SunSmart Policy

PURPOSE

The purpose of this policy is to encourage behaviours at Carranballac P-9 College that reflect a healthy UV exposure balance, ensuring some sun exposure for vitamin D while minimising the risk of skin cancer.

This policy provides guidelines to:

- support staff and students to use a combination of sun protection measures when UV index levels are 3 or above (generally September – April) and allow sun exposure when UV levels are below 3 (generally May – August)
- ensure that there are outdoor environments that provide adequate shade for students and staff
- ensure students are encouraged and supported to develop independent sun protection skills to help them to be responsible for their own protection
- support our school's strategies to meet its duty of care and occupational health and safety obligations to minimise harmful UV exposure and associated harm for students and staff.

SCOPE

This policy applies to all school activities, including camps and excursions. It is applicable to all students and staff.

POLICY

A balance of sun exposure is important for health. Excessive exposure to the sun can cause health problems including sunburn, dehydration, damage to skin and eyes, and an increased risk of skin cancer.

Too little UV exposure from the sun can lead to low Vitamin D levels. Vitamin D is essential for healthy muscles and bones, and overall health.

UV radiation:

- cannot be seen or felt
- can be reflected off surfaces such as buildings, asphalt, concrete, water, sand and snow
- can pass through light clouds
- varies in intensity across the year (highest in Victoria from September - April)
- peaks during school hours

A combination of sun protection measures are in place from September to the end of April, and whenever UV levels reach 3 and above.

SunSmart Policy

Carranballac P-9 College has the following measures in place to help reduce the risk of excessive UV sun exposure for staff and students.

Shade

The school will provide for sufficient options for shelter and trees to provide shade on school grounds, particularly in places such as:

- where students congregate for lunch
- the canteen
- outdoor lesson areas
- popular play areas including the adventure playground
- assembly areas

When building works or grounds maintenance are conducted that may impact on the level of shading available to staff and students, a review of the shaded areas available will be conducted and further shading installed as appropriate.

Sun Protective Uniform/Clothing

From September to April, and whenever UV levels reach 3 and above, students wear sun-protective clothing such as:

- loose, cool, closely-woven fabric
- shirts with a collar and/or high necklines
- tops with elbow length or long sleeves
- longer style shorts and skirts
- rash vests or t-shirts for outdoor swimming activities.

The school's school uniform and dress code includes sun-protective clothing, including:

- loose, cool, closely-woven fabric
- shirts with a collar and/or high necklines

At recess and lunch times from September to April, and whenever UV levels reach 3 and above, all students **must** wear a school uniform bucket hat when playing outside.

Students who may not be wearing appropriate protective clothing or a hat will be asked to play in the shade or in a suitable area protected from the sun.

Sunscreen

The school encourages all staff and students to apply SPF 30+ (or higher) broad-spectrum, water-resistant sunscreen daily at a minimum from September to the end of April, and whenever UV levels reach 3 and above. Sunscreen should be applied at least 20 minutes before going outdoors, and reapplied every two hours if necessary.

The school has strategies in place to remind students to apply sunscreen before going outdoors for example sunscreen monitors or sunscreen buddies in F – Year 6.

SunSmart Policy

Staff and students who may suffer from allergic reactions from certain types of sunscreen are encouraged to contact the Assistant Principal to implement a management plan to reduce the risk of an allergic reaction at school.

Staff and families should role model SunSmart behaviour and are encouraged to apply SPF 30+ (or higher) broad-spectrum, water-resistant sunscreen when outside from September to the end of April or whenever UV levels reach 3 and above.

Curriculum

Students are encouraged to make healthy choices, and are supported to understand the benefits and risks of sun exposure. The school will address sun, UV safety and Vitamin D education as part of class programs in F – Year 6 and PDHPE lessons in Years 7 - 9.

Staff are encouraged to access resources, tools, and professional learning to enhance their knowledge and capacity to promote sun smart behaviour and Vitamin D education across the school community.

Engaging Students, Staff and Families

The school will remind families through newsletters, noticeboards, the school website and school assemblies of the SunSmart policy.
